

What if there were no limits?

Visionary thinkers lead Innovation

## Creativity is not about inventing things, it is about reinterpreting them

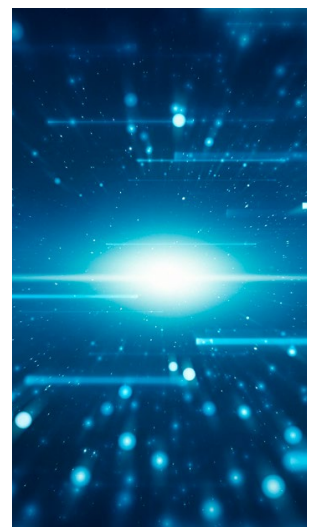

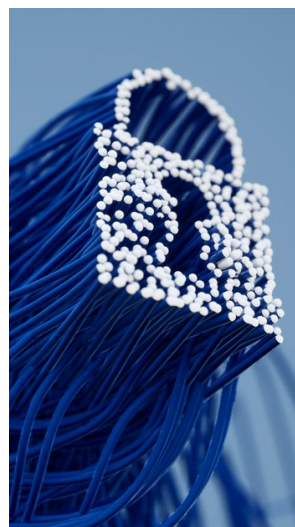

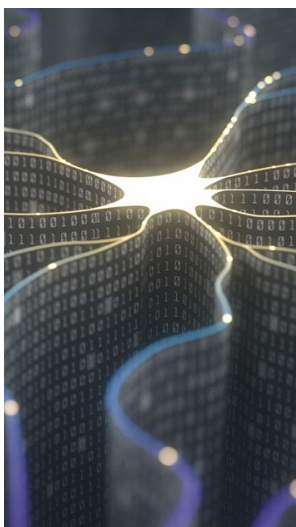

Being a part of a native digital organisation such as FasThink allows us to feel we are Visionary Thinkers. We feel liberated from the traditional perception of IT as a complex process through complex solutions.

On the contrary, like an orchestra conductor who has one in mind new interpretation, "listens" to the individual instruments and harmonizes them as a whole, directing them towards his interpretation, like this we conduct ourselves, we "orchestrate"

the existing resources and IT systems in use to direct them towards a path of "virtuous" Industry 4.0 digital transformation, the result of a long-term innovative vision, the best technological solutions and the most qualified international skills.

Creativity is not inventing things, but rather reinterpreting them, and technology doesn't necessarily have to be complex in order to be truly innovative and durable; on the contrary, in order to function it can be "easy", and – as history has taught us – when it is, it becomes universal, transversal, usable by all.

### FasThink Enable Digital Transformation

# Global Consulting and Smart Solutions for Industry 4.0

FasThink is a modern, "digital native" company that has rapidly established itself in the providing of consultancy and technological support to large-scale industries in their path towards Digital Transformation.

FasThink means designing, manufacturing and marketing of proprietary and licensed systems and components for automatic identification, traceability and factory automation in the high range of the market.

FasThink offers extraordinary design know-how, inspiring solutions that are highly innovative, redesigning the performance of the

production process in the so-called "last mile", integrating them with existing IT systems.

FasThink specialises in the design and integration of identification solutions with RFID, Barcodes, Cloud computing, Mobile computing, Wireless systems, Blockchain, Augmented reality and Localisation technologies.

FasThink solutions are used by Large Industry in the Automotive, Manufacturing, Logistics, Automation, Food, Retail and Pharmaceuticals sectors.

Thanks to FasThink, travelling the "last mile" from the IT system to the field has never been so easy and performing.

## PARTNERS

### Technology and Industry 4.0 System Partners

FasThink relies on partners of excellence who share a tireless path of Next Gen Innovation Technology with a view to Industry 4.0.

## REFERENCES

### Always at the side of important companies

Large companies and multinationals choose our identification and trackability solutions in their factories and Smart Factories both in Italy and abroad.

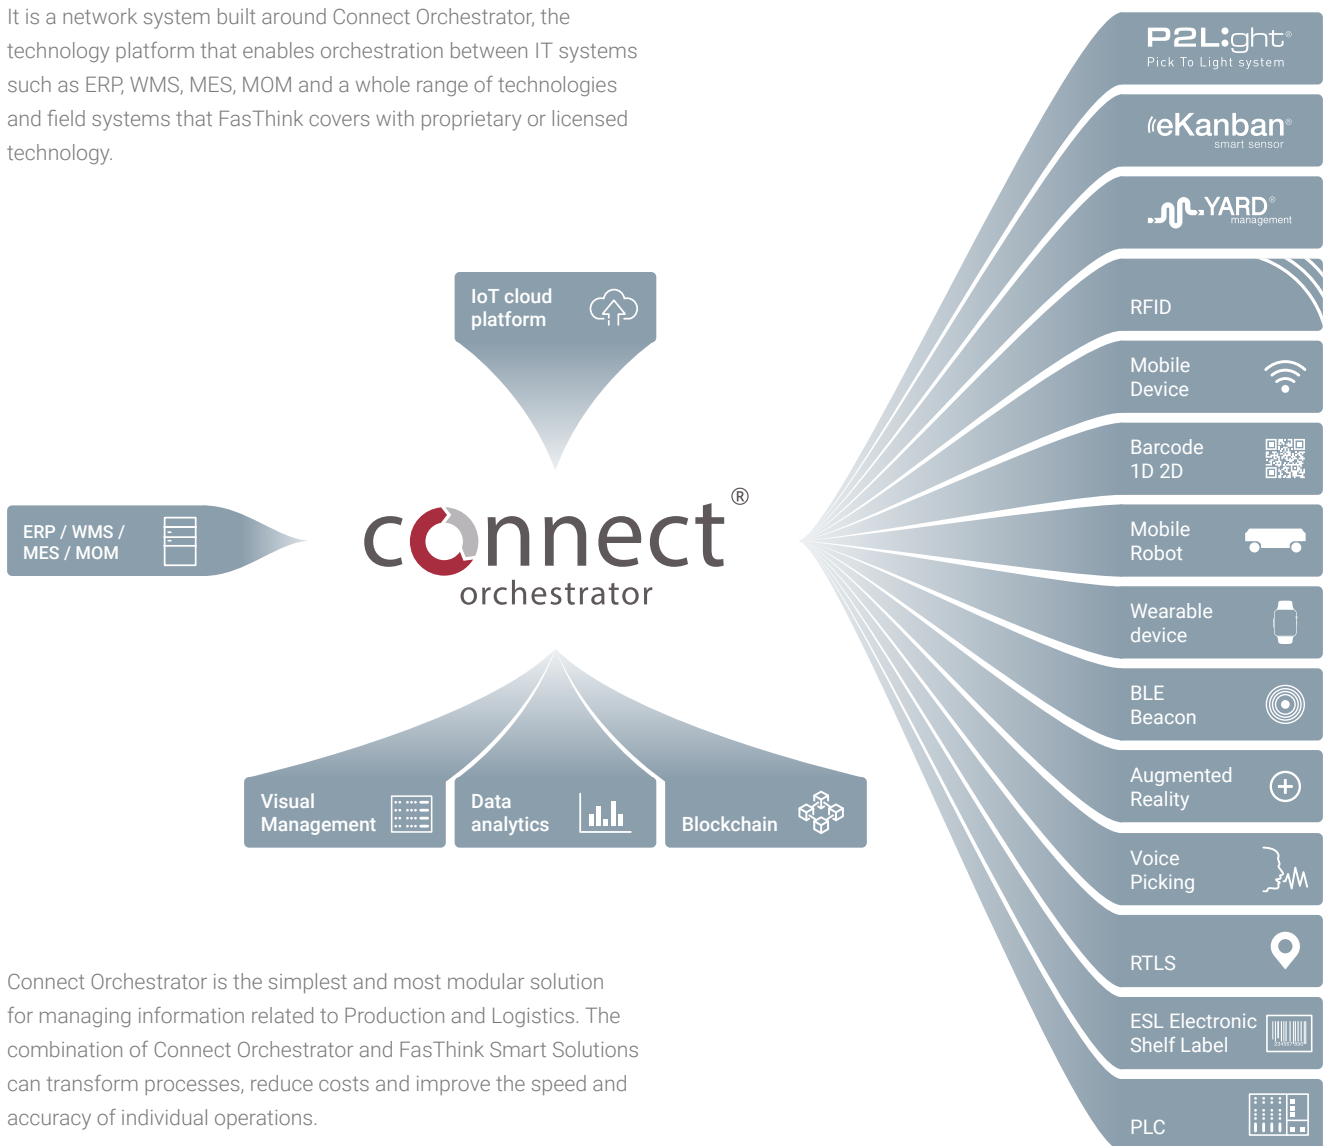

# FasThink Connect Orchestrator “the heart of the system”

The FasThink Connect Orchestrator platform for integrating and harmonising IoT and Auto ID components and technologies.

The FasThink package consists of scalable technologies for integration with existing IT systems that optimally and efficiently meet the broadest requirements of the Industry 4.0 model and the Smart Factory.

It is a network system built around Connect Orchestrator, the technology platform that enables orchestration between IT systems such as ERP, WMS, MES, MOM and a whole range of technologies and field systems that FasThink covers with proprietary or licensed technology.

Connect Orchestrator is the simplest and most modular solution for managing information related to Production and Logistics. The combination of Connect Orchestrator and FasThink Smart Solutions can transform processes, reduce costs and improve the speed and accuracy of individual operations.

Connect Orchestrator, the smart solution for overall management.

# Smart Solutions and IoT systems for identification and traceability

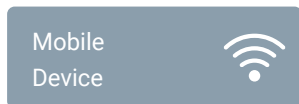

We design solutions and systems to improve the productivity, organisation and streamlining of processes by integrating existing IT systems.

The Pick To Light wireless system for improving picking processes in materials management.  
[www.picktolight.it](http://www.picktolight.it)

The software solution for the management and surveillance of inbound and outbound vehicles of production sites, warehouses and distribution centres.

Components and security, traceability and loyalty applications for Windows, Android and iOS using industrial mobile computers, PDA and tablet.

The new generation of mobile robots for the automatic transport of goods with integration into management systems.

The analysis and management of field data to automate decisions and identify patterns with the help of algorithms and artificial intelligence (AI) in order to predict corrective actions and optimise processes.

These include FasThink proprietary and licensed technologies used by large-scale industries:

The family of wireless sensors capable of remotely transmitting data and digital/analog signals.

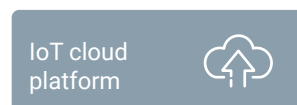

The widest selection of RFID components as well as integration solutions with embedded, industrial or gateway readers, combined with hard tag and smart label transponders in ISO standard UHF, HF and LF frequencies.

Mobile communication between operator and IT system with the use of smart watches and wearable devices.

Development of blockchain solutions dedicated to material tracking in logistics and manufacturing with the integration of IoT technologies and sensors to make the data collection process reliable, fluid and flexible.

Integration of sensors and IoT technologies with the connection to platforms based on cloud systems.
